This new model is the successor to the Redmi Note 10T 5G, which was launched less than six months ago. However, it wouldn't be fair to treat the Redmi Note 11T 5G as a minor upgrade. This new smartphone is powered by the MediaTek Dimensity 810 SoC, which is manufactured on a 6nm process. The Note 11T 5G also boasts of a 90Hz display and support for 33W fast charging. So, do all these features help the Redmi Note 11T 5G stard out? I put the phone to the test to find out. Redmi Note 11T 5G stard out? I put the phone to the test to find out. Redmi Note 11T 5G stards at Rs. 16,999 in India for the base variant which has 6GB of RAM and 64GB of storage. The variant with 6GB of RAM and 128GB of storage costs Rs. 17,999, and the top-end option which has 8GB of RAM and 128GB of storage is priced at Rs. 19,999. As an introductory offer, Xiaomi is offering a Rs 1,000 discount to its card holders. These effectively bring the price down by Rs. 2,000 for each variant. Xiaomi offers the Redmi Note 11T 5G in three colours: Stardust White, Aguamarine Blue, and Matte Black. Redmi Note 11T 5G design language, which makes it familiar and recognisable. It has a big display with a hole for the front camera, and fairly thin bezels at the top and sides while the chin is thicker. The frame and the back panel are made of plastic but feel sturdy. You'll notice the 195g weight when you pick this device up, but it is manageable. The Redmi Note 11T 5G has its power and volume buttons on the right. These are within reach when holding the device. The power button has an integrated capacitive fingerprint scanner which makes it easy to unlock this phone. On the other side, you'll only find the hybrid dual-SIM tray. Xiaomi has gone with stereo speakers on the Redmi Note 11T 5G; the grill on the top is positioned next to the secondary microphone, and 3.5mm audio jack. The Redmi Note 11T 5G in Stardust White manages to hide fingerprints well The back panel only has the camera module, and it protrudes slightly. It's big and might give the impression of a quad-camera setup, but it only houses two cameras. This is surprising since most phone manufacturers have been adding depth sensors and macro cameras to inflate the camera count for a while now. I liked the Stardust White colour variant that I received for this review for its striking looks. I also found that the back panel hides smudges quite well. Xiaomi provides a case in the box as well as a 33W charger to top up the big 5000mAh battery quickly. The Redmi Note 11T 5G is also IP53 rated for dust and splash resistance. Redmi Note 11T 5G specifications and software The highlight of the Redmi Note 11T 5G is its Media Tek Dimensity 810 SoC. This octa-core chip has two ARM Cortex-A76 cores clocked at 2.4GHz as well as six ARM Cortex A55 cores clocked at 2.4GHz. The lower-priced variants of the Redmi Note 11T 5G get 6GB of RAM with either 64GB or 128GB of storage. The higher-end variant has 8GB of RAM and 128GB of storage, and this is the one I had for this review. Xiaomi has added a memory extension feature which claims to use up to 3GB of storage space as additional RAM. This Virtual RAM feature was enabled by default on my device. You do get expandable storage, but it comes at the cost of the second Nano-SIM, since this phone has a hybrid dual-SIM slot. The big 6.6-inch display sports a full-HD+ resolution, a 90Hz refresh rate, and Corning Gorilla Glass 3 for protection. The refresh rate changes dynamically between 50Hz, 60Hz, and 90Hz based on the content on screen. I found the phone set to 60Hz by default, so you'll need to enable this manually. The Redmi Note 11T 5G is dual 5G capable, and also supports dual 4G VolTE, Bluetooth 5.1, and dual-band Wi-Fi.The hole punch on the Redmi Note 11T 5G can be distracting if you're not used to itIn terms of software, the Redmi Note 11T 5G runs MIUI 12.5 on top of Android 11, and my unit had the November Android security patch. MIUI is customised and lets users personalise it further. You still get a fair number of preinstalled apps on the phone including Xiaomi has the three-button navigation layout enabled by default, but you can switch to gestures if you like. The power button can also be configured to perform an action when double-tapped. Redmi Note 11T 5G has a crisp display, and it does get bright enough when outdoors. The refresh rate was set to 60Hz by default but bumping it up to 90Hz made animations and scrolling appear smoother. There are different display modes such as Vivid, Saturated, and Standard to choose from, and you can also tweak the colour temperature of the panel. The dual speaker setup isn't balanced, and I found the bottom speaker to be considerably louder than the one on the top.I did not notice any lag or stutter while using the phone, and multitasking between different apps was effortless. The side-mounted fingerprint scanner is convenient and quick. I ran synthetic benchmarks on the Redmi Note 11T 5G to see where the Dimensity 810 SoC stands. In AnTuTu, the phone managed 355,628 points. In Geekbench 5's single-core and multi-core tests, it scored 604 and 1,808 points respectively, and it managed 9,071 points in PCMark Work 3.0. Graphics benchmarks did not run on the Redmi Note 11T 5G consists of just two sensorsSince the Redmi Note 11T 5G consists of just two sensorsSince the Redmi Note 11T 5G. The big camera module on the Redmi Note 11T 5G is built for performance, I loaded up Battlegrounds Mobile India (BGMI) which ran at the HD graphics and High frame rate settings by default. The game was playable at these settings without any stutter. After about 16 minutes, I noted a 5 percent drop in the battery level and the phone was slightly warm to the touch. If you are looking for a gaming device on a budget, the Redmi Note 11T 5G does pack a punch. Battery life was good, and this phone lasted me over a day and a half without any issues. I observed the idle battery drain to be low, which should help it last longer when not in active use. The 5,000mAh battery managed to get the phone to 16 hours and 32 minutes in our HD video loop test. The refresh rate was set to 90Hz during this test. Charging with the supplied 33W fast charger was quick - the phone got to 56 percent in 30 minutes and got to 97 percent at the one hour mark.Redmi Note 11T 5G cameras The Redmi Note 11T 5G has a 50-megapixel primary camera and an 8-megapixel ultra-wide angle camera; it does not have a depth sensor or macro camera. The missing sensors aren't a deal breaker, unless you enjoy taking macro photos. For selfies, it has a 16megapixel front shooter in the hole-punch cutout. The camera app is familiar and all the different shooting modes are laid out logically. There are quick to lock focus and set the exposure correctly. Daylight shots looked good on the phone's screen, but magnifying them later revealed average details. The phone seems to over sharpen photos, leading to a loss in detail in the shadows. The ultra-wide angle camera does help you capture a wider field of view, but its output isn't as detailed as that of the primary camera. I also noticed distortion in a few shots, in spite of distortion correction being enabled by default. Redmi Note 11T 5G daylight sample (tap to see full size)Redmi Note 11T 5G ultra-wide camera at its full 50-megapixel resolution but details were only marginally better. These photos also looked oversharpened.Redmi Note 11T 5G close-up sample (tap to see full size)Redmi Note 11T 5G Portrait mode sample (tap to see full size)Close-up shots fared better and the Redmi Note 11T 5G did manage to capture textures well. It adds a soft blur to the background even without Portrait shots had good edge detection, and you can set the level of blur before taking a shot. Surprisingly, portrait shot files were 8MB-10MB each, approximately three times the size of a regular shot. Redmi Note 11T 5G low light sample (tap to see full size) Redmi Note 11T 5G Night mode sample (tap to see full size) Redmi Note 11T 5G Night mode sample (tap to see full size). shot in Night mode, but these photos had better colour and marginally better details. Redmi Note 11T 5G low light selfie portrait sample (tap to see full size) Selfies shot in daylight had good detail and the Portrait mode managed good edge detection. Low-light selfies with a light source nearby also turned out well. Video recording tops out at 1080p 60fps which is rather surprising since the older Redmi Note 11 Sc is the first smartphone in the Redmi Note 11 series to launch in India. Just like its predecessor, the Note 11T 5G is clearly focussed on performance. The Dimensity 810 SoC is powerful and also supports 5G which should be a selling point when networks finally roll out here. MIUI 12.5 isn't as spammy as previous versions but this phone still comes with a sizable number of preinstalled apps. Finally, the big 5,000mAh battery delivers good battery life and the 33W fast charging capability helps keep charge time relatively low. However, the Redmi Note 11T 5G falls short in camera performance and this could discourage people looking for an all-rounder. If cameras aren't high up on your priority list, the Redmi Note 11T 5G will still do. If you are looking for alternatives, the Realme 8s 5G (Review) is worth a look.
